INSTALLATION PROCEDURE

- Physically mount the P2x-P3x Series Smart Camera.
- All the necessary firmware is installed on the P2x-P3x Series at the factory. Install VPM Software (Vision Program Manager) on an host PC. Machine Vision installation software can be downloaded from the datasensing website (www.datasensing.com). Refer to the Impact Reference Guide for programming details.
- Make the necessary electrical connections. Camera communication is provided through the GigaEthernet port. Use the cable CAB-ETH-Mxx. Maximum cable length is 10 meters.
- Start VPM.
- Choose the camera.
- If the default IP mask and address work for your installation, you don't need to change them. Otherwise, you can modify the settings.
- To enable the illuminator go to the Settings Tab. Select Camera and choose the Illuminator Tab. Go to Mode then set the Illuminator's operating mode to Normal or Power.
- In the Settings Tab, select Camera then choose the desired photometric

- parameters and the trigger type.
- Load an existing Vision Program file or create a new one.
 - Put the camera online.
